Inserts

Add the perfect insert from a Thorntons mint, to a shortbread, or even a Christmas plush gift. Please contact the sales team for the full range available.

and many more....

Packaging

Plate Box

Each box comes lined with folded coloured tissue paper to help protect the plate. Velvet inner lining available on request.

Presentation Box

Perfect for corporate gifts, special occasions or a well done present. Printed options are available (ask for details). A wide range of colours available

Acetate Box

Logos & Designs can be printed on inserts (Ask for further details). Virtual point of sale presentation material. Card layers are used to transport beakers safely.

Postal Corrugated Box

Available in single, single extended, 2 mug, 4 mug and 6 mug capacity boxes. Fold over tongues to divide beakers which help minimise fractures and chips. Strong and rigid design to help withstand transportation. Also available as a plate box.

Printed Box

Perfect for corporate gifts and special occasions. Stylish and contemporary. Full colour print available.

Polystyrene Box

Lightweight - Keeps postage costs down. Fits standard size mug (Cambridge). Absorbs post & transit shocks with comfort.

Direct Screen Printing

Ideal for: Earthenware; cost effective in both large and small runs. Can also be used on Bone China.

Not for: Complex half tones.

An image, usually up to four line colours, is printed within a given area directly onto the rotating body of the mug.

The method is used when:

- The design is simple.
- There are no complex half-tones, although some half-tones can be directly printed.
- The registration is not over demanding.
- The design is not required to be larger than the print area.

Direct printing is a cost effective option when ordering small or large quantities. A direct printer can print several thousand items a day, in contrast to the more time consuming hand decorated transfer process.

Transfer Printing

Ideal for: Earthenware and Bone China; more complex art tones; critical registration and full colour work; printing on the full surface of the item; highly-shaped items.

The design is silk-screen or litho printed onto special paper which is then cover-coated. The resulting print is treated as a water slide transfer and applied by hand to the ware. The process is slower and more labour intensive than Direct screen printing, but is more flexible as colours are able to be built up with precision and control. This process allows you to maximise the print area as well as giving you the option to print inside on the base, as a back stamp, on the handle or inside the rim.

Digital Printing

Ideal for: Photo images and designs without bright primary colours; both earthenware and bone china; small print runs.

Not for: Any images with strong primary colours or coloured glazed ceramics.

An image is printed directly onto a specially coated paper in process colour, using technology similar to an office laser printer. This is then cover-coated, becoming a water slide transfer which is applied to the ware. As with full colour printing, there are limitations on the strengths of reds and pinks but with pastels and citrus shades the results are excellent. As the inks are a natural product, perfect colour matching cannot be achieved on repeat orders and it is not possible to match the primary colour chart. However this technique is ideal for photographic reproduction.

Dye Sublimation Printing

Ideal for: All colours you desire; full colour images; stunning photographic reproduction; small order quantities; fast turnaround.

Not for: Certain mug shapes.

Dye sublimation enables accurate colour reproduction. A four colour high quality photo finish is possible with crystal clear results and bright impact colours. The technique uses organic colour dyes. This opens up a more diverse colour spectrum which gives you an outstanding gloss appearance. This process is also environmentally friendly, avoiding the use of substances such as lead and cadmium. We also offer a Millennium Coated mug which has been manufactured to withstand over a thousand dishwasher cycles and is the most durable dye sublimation mug available.
